1. Introduction 概述介绍

The **STP0154F-240240(CTP)** model is a Color TFT LCD supplied by WOLCD Technology co.,Ltd This Module has a **1.54** inch diagonally measured active display area with **240(RGB)×240** resolution. **220 PPI**.Each pixel is divided into Red, Green and Blue sub-pixels and dots which are arranged in vertical stripes.

LCD color is determined with 1600,000 colors signal for each pixel.

The **STP0154F-240240(CTP)** has been designed to apply the interface method that enables low power, high speed, and high contrast.

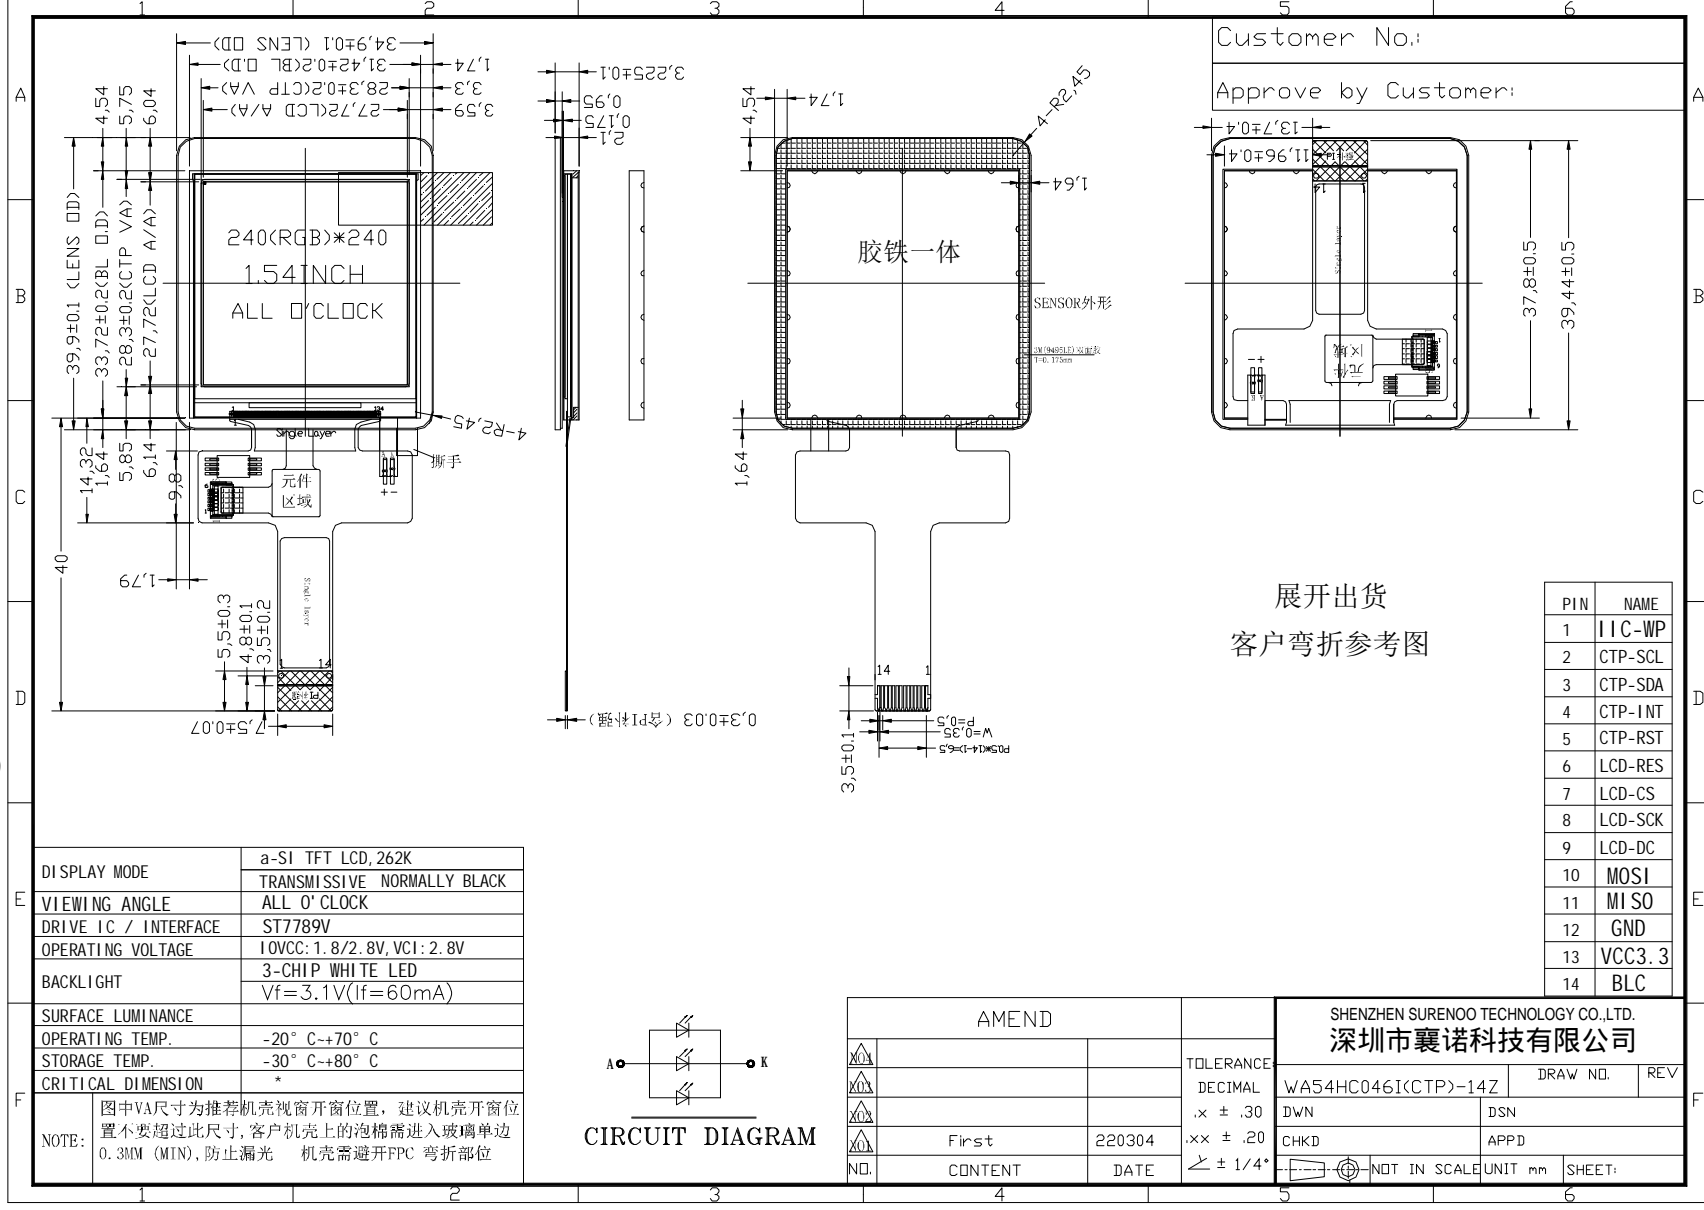

The **STP0154F-240240(CTP)** is intended to support applications where thin thickness, wide viewing angle and low power are critical factors and graphic displays are important.

Note

The recommended operating conditions refer to a range in which operation of this product is guaranteed. Should this range is exceeded, the operation cannot be guaranteed even if the values may be without the absolute maximum ratings.

Accordingly, please make sure that the module is used within this range. And these current values are measured under the condition that all devices are stopped, each component is stable and logic signal is input.

11.LCM Quality Criteria

11.1 VISUAL & FUNCTION INSPECTION STANDARD

11.1.1 Inspection conditions

Inspection performed under the following conditions is recommended.

Temperature : $25 \pm 5^{\circ}\text{C}$

Humidity : $65\% \pm 10\% \text{RH}$

Viewing Angle : Normal viewing Angle.

Illumination: Single fluorescent lamp (300 to 700Lux)

Viewing distance: 30-50cm

11.1.2 Definition

Zone A : Effective Viewing Area(Character or Digit can be seen)

Zone B : Viewing Area except Zone A

Zone C : Outside (Zone A+Zone B) which can not be seen after assembly by customer .)

Note:

As a general rule ,visual defects in Zone C can be ignored when it doesn' t effect product function or appearance after assembly by customer.

11.1.3 Sampling Plan

According to GB/T 2828-2003 ; , normal inspection, Class II

AQL:

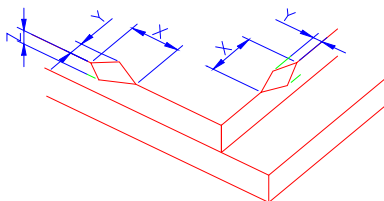

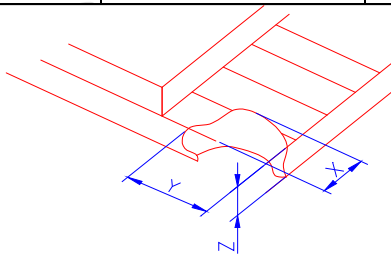

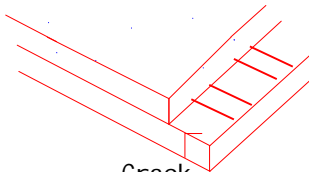

Major defect	Minor defect
0.65	1.5

LCD: Liquid Crystal Display , TP: Touch Panel , LCM: Liquid Crystal Module

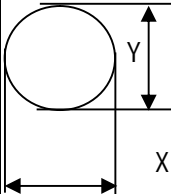

No	Items to be inspected	Criteria	Classification of defects
1	Functional defects	1) No display, Open or miss line 2) Display abnormally, Short 3) Backlight no lighting, abnormal lighting. 4) TP no function	Major
2	Missing	Missing component	
3	Outline dimension	Overall outline dimension beyond the drawing is not allowed	
4	Color tone	Color unevenness, refer to limited sample	Minor
5	Soldering appearance	Good soldering , Peeling off is not allowed.	

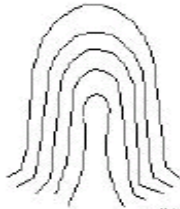

6	LCD/Polarizer/TP	Black/White spot/line, scratch, crack, etc.

11.2 RELIABILITY TEST

NO	ITEM	CONDITION	STANDARD
1	High Temp. Storage	70°C, 12 hours	1. Functional test is OK. Missing Segment, short, unclear segment, non-display, display abnormally and liquid crystal leak are un-allowed. 2. No low temperature bubbles, end seal loose and fall, frame rainbow.
2	Low Temp. Storage	-20°C, 12 hours	
3	High Temp. Operation	60°C, 12 hours	
4	Low Temp. Operation	-20°C, 12 hours	
5	High temperature and high Humidity storage	40°C, 90%RH, 12 hours	
6	Thermal and cold shock	Static state, -20°C (30 Min) ~70°C (30 Min) ~ -20°C (30Min), packaging, 10 cycles	1. Function test is OK. 2. No glass crack, chipped glass, end seal loose and fall, epoxy frame crack and so on. 3. No structure loose and fall.
7	Vibration test	Packaging, Frequency : 10-55Hz Amplitude : 1.0mm, Each direction on X,Y axe 0.5 hours, circle 2 hours	
8	Dropping test	Pack products into the carton box. Drop it from 80cm height to ground. Once for each side of the carton	

NOTE:

10.2.1 The reliability items will be fully performed in new sample qualification,

11.2.2 The reliability status will be tested as monitor during mass production. Individual reliability test shall be

performed by lot , Moreover, the individual reliability item shall be decided according to reliability plan.

11.2.3 All samples are inspected after keeping in the room with normal temperature and humidity for 2 hours or above.

11.2.4 Vibration test: It is not necessary to test for those products without assembly frame , back light ,PCB and so on.

11.2.5 Dropping test : It is necessary for affirming new package.

11.2.6 For the high temperature and high humidity test, pure water of over 10 M Ω .cm should be used.

11.2.7 Each test item applies for test LCM only once .Then tested LCM cannot be used again in any other test item.

11.2.8 The quantity of LCM examination for each test item is 5pcs to 10pcs.

11.3 Safety instructions

11.3.1 If the LCD panel breaks, be careful not to get any liquid crystal substance in your mouth.

11.3.2 If the liquid crystal substance touches your skin or clothes, please wash it off immediately by using soap and water.

11.4 Handling Precautions

11.4.1 Avoid static electricity damaging the LSI.

11.4.2 Do not remove the panel or frame from the module .

11.4.3 The polarizing plate of the display is very fragile . So, please handle it very carefully.

11.4.4 Do not wipe the polarizing plate with a dry cloth, as it may easily scratch the surface of the plate.

11.4.5 The color tone of display and background of LCM has the possibility to be changed in the storage temperature range.

11.4.6 Pay attention to the working environment, as the element may be destroyed by static electricity.

--Be sure to ground human body and electric appliance during work.

--Avoid working in a dry environment to minimize the generations of static electricity.

--Static electricity may be generated when the protective film is fast peeled off.

11.4.7 When soldering the terminal of LCM, make certain the AC power source of soldering iron does not leak.

11.4.8 If the display surface becomes contaminated , breathe on the surface and gently wipe it with a soft-dry-clean cloth .If it is heavily contaminated ,moisten cloth with the following solvent(ex: Ethyl alcohol).Solvents other than those above-mentioned may damage the polarizer(Especially , do not use them .ex: Warter / Ketone)

11.5 Operation instructions

11.5.1 It is recommended to drive the LCD within the specified voltage limits, try to adjust the operating voltage for the optimal contrast, the color and contrast of LCD panel will varies at different temperature.

11.5.2 Response time is greatly delayed at low operating temperature range. However, this does not mean the LCD will be out of the order, It will recover when it returns to the specified temperature range.

11.5.3 If the display area is pushed hard during operation, the display will become abnormal.

11.5.4 Do not operate the LCD at the environments over the specified conditions, this may cause damage on the LCD and shorten the lifetime.

11.6 Storage instructions:

11.6.1 Store LCDs in a sealed polyethylene bag.

11.6.2 Store LCDs in a dark place, Do not expose to sunlight or fluorescent light. Keep the temperature between 0°C and 35°C.

11.6.3 Avoid the polarizer touch any other object, (It is recommended to store them in the container in which they were shipped.)

11.7 Limited Warranty

11.7.1 LEAD will replace or repair any of its LCD modules, which are found to be defective, when inspected in accordance with LEAD LCM acceptance standards (copies available upon request) for a period of 12 months from ink- print date on product

11.7.2 Any defects must be returned to LEAD within 60 days since ship-out. Confirmation of such date shall be based on freight documents. The warranty liability of LEAD limited to repair and/or replacement on defects above (7.1,7.2)

11.7.3 No warranty can be granted if the precautions stated above have been disregarded. The typical samples are as below:
